DETAILED ACTION

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance: The amended claims feature the distribution of a processing load, wherein a designation of a first resource as an intake providing a specific type of service takes place. New requests for service are directed to the intake, where the requesting clients receive services from this intake. Then, it is determined that a second resource be designated as the new intake, where the first resource announces to the rest of the resources that the new intake is the second resource, where the new intake is a single entry-point resource. The new intake then serves the requests of the requesting clients. Because communication takes place between resources and other resources, and because the new intake is a single entry point resource, it is believed that the claimed invention is novel. The examiner was unable to procure prior teachings of such features as claimed by the amended claims, could not render said features obvious to one of ordinary skill in the art, without the use of impermissible hindsight constructions. Additionally, Applicant's remarks regarding the claim amendments and the provided prior art references' deficiencies are persuasive, in that none of the references taken singly, or in combination, teach the newly claimed features. It is therefore the examiner's belief that the claimed invention does indeed possess novelty.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee, and to avoid processing delays, should preferably accompany the issue

fee. Such submissions should clearly be labeled "Comments on Statement of Reasons for Allowance."
